Abstract of DE3429584

The invention relates to a combustion-improving additive composition for cleaning heating devices, chimneys, smoke flues and heat regenerators. The composition according to the invention contains 15 to 20 parts by weight of an ammonium derivative component, namely ammonium carbamate and ammonium bicarbonate, 5 to 40 parts by weight of a magnesium derivative component, namely magnesium oxide and magnesium carbonate, 5 to 30 parts by weight of sodium chloride, 0 to 30 parts by weight of ammonium sulphate, 1 to 5 parts by weight of alpha -naphthoquinone, 0.1 to 1 part by weight of copper naphthenate, 0.1 to 1 part by weight of magnesium stearate, 4 to 9 parts by weight of a metal oxide component, namely alumina and iron(III) oxide, and 0 to 6.5 parts by weight of silica and calcium oxide.
